Excipient + API Co-processing

It is now recognized by many experts in the pharmaceutical and excipient industries that co-processing can and often does create synergy. Performance of excipient co-processed greater than the parent ingredients alone or simply blended.

Possible advantages of API/excipient co-processing:

- Reduce development time and costs
- Customize API delivery
- Enhance bioavailability
- Improve stability
- Streamline manufacturing
- Raise quality standards
- Improve patient compliance

As Chineway is the industry leader in pharmaceutical excipients and coating customized services in the technology introduction, supply and technical support, we welcome API suppliers to jointly develop the technology to co-process with excipients.
